Migration data relevant for the COVID-19 pandemic

Script generation accepts the following two arguments to indicate which range of migrations should be generated: The from migration should be the last migration applied to the database before running the script. If no migrations have been applied, specify 0 (this is the default).; The to migration is the last migration that will be applied to the database after running the script.

Applying Migrations - EF Core | Microsoft Docs

The `createFromAsset()` method accepts a string argument that contains a relative path from the `assets/` directory to the prepackaged database file.. Note: When prepopulating from an asset, Room validates the database to ensure that its schema matches the schema of the prepackaged database. You should export your database's schema to use as a reference as you create the prepackaged database file.
