Abstract This feature issue presents recent progress in long-wavelength photonics, focusing on wavelengths that span the mid-infrared (3-50 μ m), the long-wavelength infrared (30-60 μ m), and the terahertz (60-300 μ m) portions of the electromagnetic spectrum.

Mid-infrared, long-wave infrared, and terahertz photonics ...

Terahertz (THz) wave is electromagnetic wave or light in a frequency range of 0.3-30 THz, located between microwave (electronics) and infrared (optics) frequencies. THz operation frequencies have traditionally been a long-standing goal for both high-speed microwave semiconductor devices in electronics and long-wavelength devices in optics.
