Operations researchers have come to realize that most problems do not arise in isolation but are part of an interacting system. The process of seeking simultaneous interrelated solutions to a set of interdependent problems is planning.

The solutions of these problems are provided in a concise way although all topics start with a more developed resolution. The proposed problems are based on the research experience of the authors in real-world companies so much as on the teaching experience of the authors in order to develop exam

In operations research, a team of experts from the different fields first define the problem then represent that problem in the form of a set of mathematical equations. After that, the computer analysis of these mathematical equations is done to find a solution for the

problems, and then these solutions are applied to solve managerial and administrative problems.

The British/Europeans refer to "operational research", the

Americans to

"operations research" -

but both are often

shortened to just "OR"

(which is the term we will use). Another term

which is used for this

field is "management

science" ("MS"). The

Americans sometimes

combine the terms OR

and MS together and

say "OR/MS" or
"ORMS".

Simplex Method:

Example 1. Maximize z
 $= 3x_1 + 2x_2$. subject
to $-x_1 + 2x_2 \leq 4$ $3x_1$
 $+ 2x_2 \leq 14$ $x_1 - x_2 \leq$
 3 . $x_1, x_2 \geq 0$.

Solution. First, convert
every inequality
constraints in the LPP
into an equality
constraint, so that the
problem can be written
in a standard form.
