Husserliana

The notions of space and time have been a subject of philosophical discussion since antiquity. In modern philosophy, Newton's concepts of absolute space and absolute time was subject to criticism by empiricists like Berkeley and Hume, who prepared the ground for Einstein and the ideas behind his theories of relativity.

Philosophy of space and time is the branch of philosophy concerned with the issues surrounding the ontology, epistemology, and character of space and time. While such ideas have been central to philosophy from its inception, the philosophy of space and time was both an inspiration for and a central aspect of early analytic philosophy.

Philosophy of space and time - Wikipedia

the objective body, the objective world, the objective space and time, etc, to the existential picture of being-in-the-world, or the communicative relation between body and world, whose moments become the lived body as perceptual consciousness, the perceived world, the lived space and time, etc.

Merleau-Ponty's Phenomenology of Space

Phenomenology offers neither metaphysical speculation about time's relation to motion (as does Aristotle), nor the psychological character of time's past and future moments (as does Augustine), nor transcendental-cognitive presumptions about time as a mind-dependent construct (as does Kant).

When space as the container started to show signs of rupturing (i.e., being discontinuous) it was turned into the object within a more comprehensive (and continuous) container called space-time. Rosen then shows how the upsurge of apeiron affected the culture at large through the art of the time.

Dimensions of Apeiron: A Topological Phenomenology of ...

Whether or not space-time is fundamentally discrete is of central importance for the development of the theory of quantum gravity. If the fundamental description of spacetime is discrete, typically represented in terms of a graph or network, then the apparent smoothness of geometry on large scales should be imperfect—it should have defects.

Being and Time (German: Sein und Zeit) is a 1927 book by the German philosopher Martin Heidegger, in which the author seeks to analyse the concept of Being. Heidegger maintains that this has fundamental importance for philosophy and that, since the time of the Ancient Greeks, philosophy has avoided the question, turning instead to the analysis of particular beings.

The Phenomenology of Spirit (German: Phänomenologie des Geistes) (1807) is Georg Wilhelm Friedrich Hegel's most widely discussed philosophical work; its German title can be translated as either The Phenomenology of Spirit or The Phenomenology of Mind. Hegel described the work as an "exposition of the coming to be of knowledge". This is explicated through a necessary self-origination and ...
