Java Servlet is the foundation technology for Java server-side programming. You need to understand Servlet thoroughly before you could proceed to other Java server-side technologies such as JavaServer Pages (JSP) and JavaServer Faces (JSF). 2.

Java Server-Side Programming - NTU

All of us would have started programming in java with the famous "hello world" program. If you can recollect, we saved the file with a 'java' extension and later compiled the program using 'javac' and then executed the program using 'java'. Apart from introducing you to the language basics, the important point is that it is a client-side program. That means you write, compile and execute the ...

Explain Server Side Programming | Computer Notes

The Dynamic Websites – Server-side programming topic is a series of modules that show how to create dynamic websites: websites that deliver customised information in response to HTTP requests. The modules provide a general introduction to server-side programming, along with specific beginner-level guides on how to use the Django (Python) and Express (Node.js/JavaScript) web frameworks to ...

Server-side website programming - Learn web development | MDN

Server-side JavaScript. JavaScript, programming language of the Web, is used primarily on websites and web applications and executed by web browsers. However JavaScript is general purpose language and can be used for other programming tasks. It can be used on server side, what in this case means every place outside of the web browser.

Server-side JavaScript - JavaScript Institute

Use server-side programming to develop data logic that resides in the database An application can explicitly invoke stored subprograms (procedures and functions), written in PL/SQL (pronounced P L sequel) or Java. You can also create a trigger, which is named program unit that is stored in the database and invoked in response to a specified event.

Server-Side Programming: PL/SQL and Java
